EDUCATION

Software Technology

Ho Chi Minh University of
Technology and Education
GPA: 3.35/4

TECHNOLOGY SKILLS

Foundation:

- Java 8, TS, OOP, SOLID, DSA
- MySQL, MongoDB
- Design: ERD, sequence, communication diagram
- Testing: black box, white box

Basic :

- Spring Boot, Nest.JS
- React.JS, Bootstrap, AntDesgin
- Access control: JWT with secret / key pair, symmetric RBAC
- Others: Redis

Tools:

- Git (merge & resolve conflict, rebase)
- Debug vscode
- Draw.io, Jira, Docker, Postman, Apache Bench

LANGUAGE

- TOEIC 605.
- Actively working on improving verbal skills.

SOFT SKILLS

- Presentation Skills
- Research Skills
- Teamwork Skills

PROFILE

As a **4th-year software technology student** at HCMUTE, I am ready for a **fulltime job**. With a foundation in the information technology industry, especially **Nest.JS, Spring Boot, React.JS**, I am eager to contribute significantly to business projects by leveraging my knowledge.

PROJECTS

Menshop Website

[Github](#)

9/2024 - 11/2024

Description: An ecommerce platform sells fashion products with varying attributes from multiple stores.

Architecture: RESTful API, Layered Arch with Next.JS, Nest.JS, MongoDB, Redis.

Responsibility: Leader, BA, BE Developer.

My Highlighted Tasks:

- Analyst & design: use case, sequence, communication, ERD diagrams
- User, access services:
 - Authenticate by **JWT** with **RSA key pair**.
 - Authorize by **symmetric RBAC** with 4 roles: admin, seller, employee, client. Sellers can customize employee permissions per shop.
 - Apply **Factory & Strategy patterns** to create users based on roles while adhering to SOLID principles.
- Product services:
 - Use **MongoDB attribute pattern** for products with non-uniform attributes.
 - Implemented **full-text search** with indexing and relevance-based sorting.
- Order, discount, inventory services:
 - Implement **pessimistic locking** and **Redis** caching to ensure stock consistency under high concurrency. Pass a test case with **10 concurrent requests** to a product with 1 unit in stock using Apache Bench
 - Validate, transform, apply, cancel discount vouchers

Jobhunt Website

[Github](#)

7/2024 - 8/2024

Description: A job hunter website is built based on the ITviec model.

Architecture: RESTful API, Layered Arch with React Vite, Spring Boot, MySQL.

Responsibility: BE Developer.

My Highlighted Tasks:

- Authenticate by **JWT** with **secret key** and authorize by **hierarchical RBAC**
- **Send email** subscribers to introduce jobs that **match with skills** subscribed asynchronously and **on a scheduled basis**
- Create a **dashboard** to show statistics on new jobs, number of applications,...
- Normalize the database to **third normal form** (3NF)
- Others: **handle exception**, api versioning, soft delete, patch update
